

E-SENSE TUNE

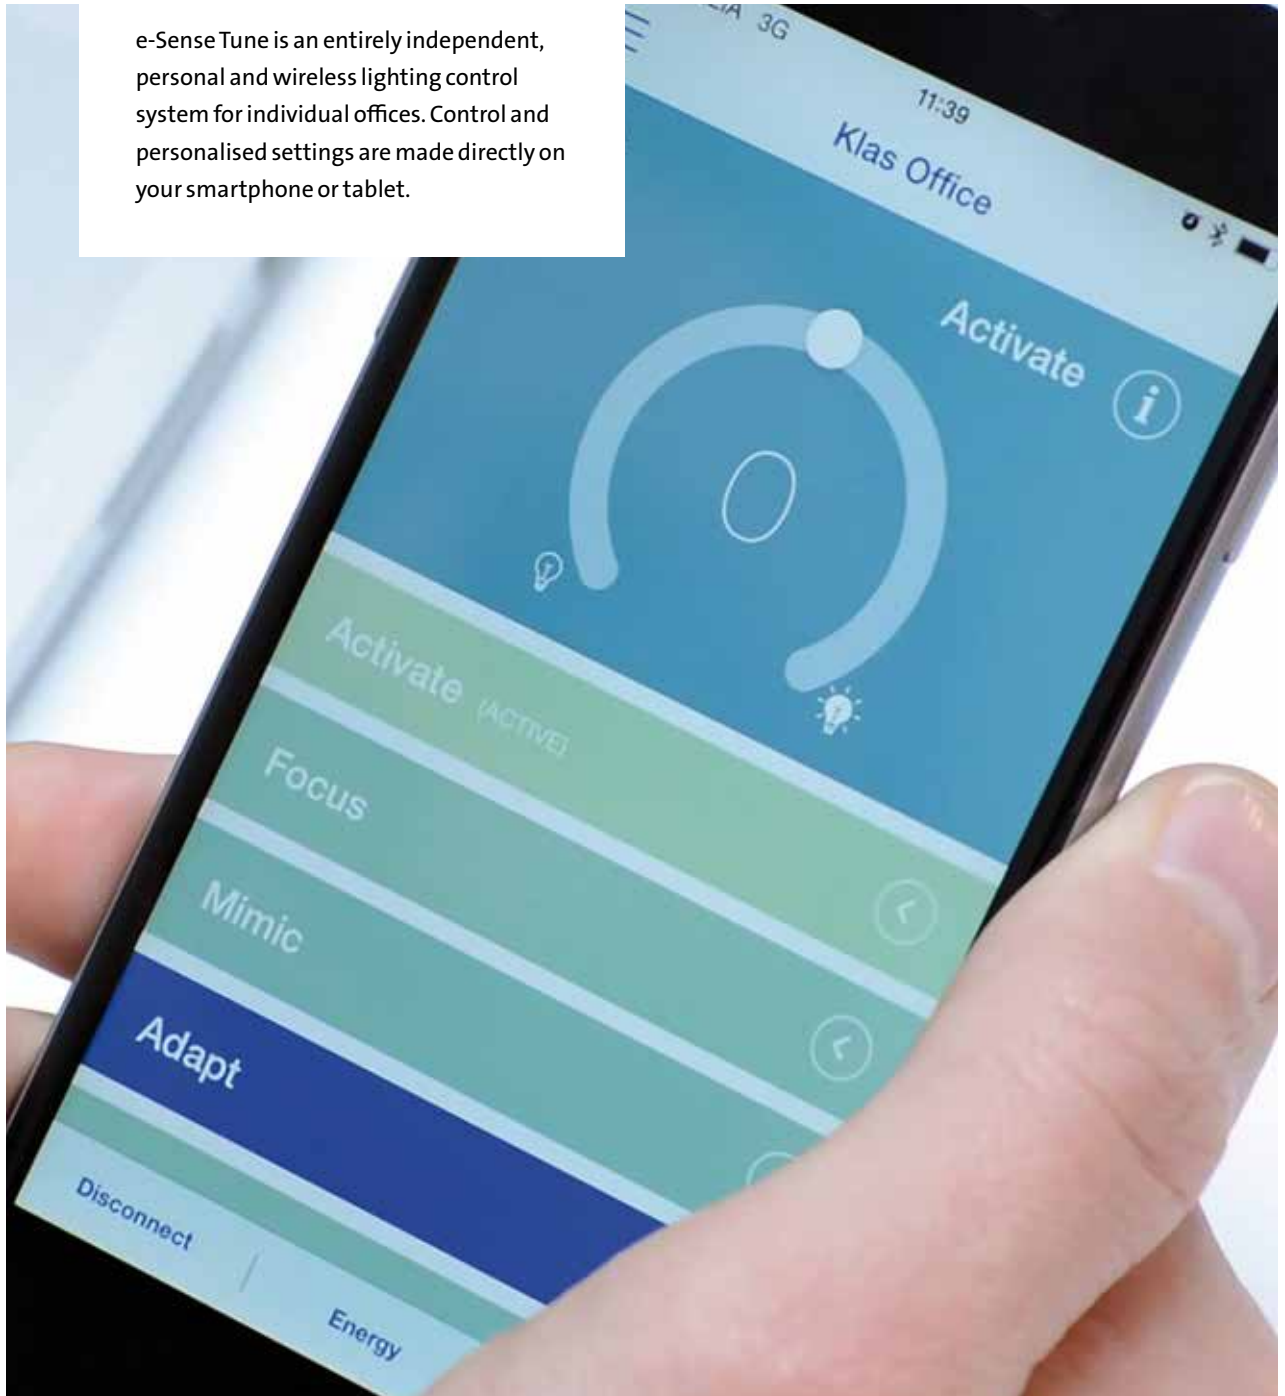

Wireless control for personalised lighting

FAGERHULT

e-Sense Tune

e-Sense Tune is an entirely independent, personal and wireless lighting control system for individual offices. Control and personalised settings are made directly on your smartphone or tablet.

e-Sense Tune is a quickly installed lighting control system that is easy to control and expand. It works with all applications in which users are permitted to individually control lighting. e-Sense Tune is designed for individual offices, conference rooms and activity areas.

The system is wirelessly controlled via Bluetooth Low Energy / Bluetooth Smart with a smartphone or tablet. Once you have made your settings, the system will automatical-

ly identify you when you enter the room and adjust to your personal preferences.

Users outside the room can not influence the system. Presence without a device provides general lighting for cleaning services or similar activities.

e-Sense Tune comes with preset scenes and features for energy savings or daylight simulation. Additionally, the user has the option to create two personal lighting scenes.

With e-Sense Tune you can adjust the lighting to your personal preferences. e-Sense Tune produces light that imitates daylight, preventing fatigue and keeping your spirits high.

Advantages

- Easily installed and easy to expand.
- Personal control.
- Personalised lighting for activities and improved sense of well-being.
- High information security.

Functions

Presence control
Presence detection automatically turns lights off and on. Adjustable time between detection and switch-off.

Daylight control
Lighting is adjusted to the amount of incident daylight.

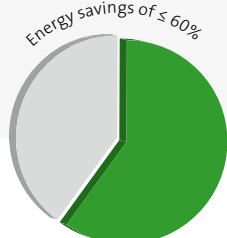

Tunable White
Regulates the light's colour temperature.

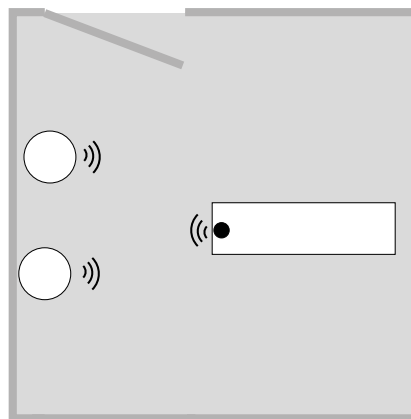

Wireless communication
Existing installations do not need to be reworked when new lighting is added.

Wireless control
Programming and control via a smartphone or tablet.

Installation example

- Sensor integrated in master luminaire

Up to 10 slave luminaires can be connected to a master.

Accessories

App for smartphone and tablet

e-Sense stands for ease-of-use, efficiency, ergonomics and economy. With lighting control you get the right light at the right place, at the right time. Fagerhult's lighting control concept, e-Sense, is easy to install and provides a multitude of different alternatives for both offices and classrooms, and shops and outdoor environments. We help you to find the e-Sense system that best meets your needs.
